

## GitHub submission

If you want to read up on GitHub, please check [this](#) quick read. Please use the below process to upload code to GitHub.

### CREATE REPOSITORY AND UPLOAD SOLUTION:

1. Login to **Gitub.com** with your credentials (first time users need to create the account/profile)
2. Create a new project repository selecting public option, you can make it private once the code is reviewed. Check repository creation video on YouTube [here](#).
3. Name your code repository as -> <college>-<team>-<project>
4. Follow the commands provided on GitHub page post repo creation
5. You can clone the remote-repository on your local-working directory using command:  
`git clone https://github.com/<account name>/<project name>.git`
6. Develop the solution and push the source code using the command below.  
`git push -u origin branch-name`
7. Share your repository URL post source code submission to us on shared email id.
